RE: Interior Shower Door

OVERVIEW: This Service Bulletin covers the inspection and course of action to fix or prevent an interior shower door leak on your Little Guy Max or Little Guy Mini Max travel trailer.

MODELS: Little Guy Max and Little Guy Mini Max

WHAT TO LOOK FOR: Over the past couple months it was brought to our attention that there was a problem with some of the Little Guy Max interior shower doors. After various tests we have diagnosed the problem as a shower door flaw/malfunction. The shower water can run down the glass door, enter the shower door track, follow the track to the outside of the door and flow over the edge causing water to run into the main cabin of the trailer. Applying sealant to various edges of the shower door (pictures below) will keep water from exiting the shower.

WHAT TO USE: Any brand of weatherproof caulk/silicone will work on the exterior of the unit. We use Crystal Clear and White Soudaseal Sealant.

SUMMARY: Applying sealant will keep water from exiting through your shower door. This new process of applying sealant to the shower has been used on the production line for the last month with positive results. This process has been used on Max's and Mini Max's. Your trailer may not be affected depending on when you have purchased it but we recommend taking a look at your shower door to verify.
